"Molecular cloning and characterization of the G protein gamma subunit of come photoreceptors";
J. Biol. Chem. 270:8495-8500(1952).
-!- FUNCTION: GUANINE NUCLEOTIDE-BINDING PROTEINS (G PROTEINS) ARE INVOLVED AS A MODULATOR OR TRANSDUCER IN VARIOUS TRANSMEMBRANE SIGNALING SYSTEMS. THE BETA AND GAMMA CHAINS ARE REQUIRED FOR THE GTPASE ACTIVITY, FOR REPLACEMENT OF GDP BY GTP, AND FOR G PROTEIN-EFFECTOR INTERACTION.
-!- SUBUNIT: G proteins are composed of 3 units (alpha, beta and

C. I. FUNCTION: DOES NOT FUNCTION AS A GLUTATHIONE DISULFIDE
OXIDOREDUCTASE IN THE PRESENCE OF GLUTATHIONE AND GLUTATHIONE
C. REDUCTASE. MAY BE A COMPONENT OF A RIBONUCLEOTIDE-REDUCING SYSTEM
DISTINCT FROM THE PREVIOUSLY DESCRIBED SYSTEMS UTILIZING
THIOREDOXIN OR GLUTAREDOXIN.

T. Gomplete genome sequence of Methanobacterium thermoautotrophicum

T. deltaH: functional analysis and comparative genomics.";

J. Bacteriol. 179:7135-7155 (1997).

-I. FUNCTION: ACTS TO MAINTAIN REDOX HOMEOSTASIS; FUNCTIONS AS A

PROFILE IN SEDUCHARE REDUCHASE (BY SIMILARITY).

-I. SUBCELLULAR LOCATION: CYtoplasmic (By similarity).

-I. SIMILARITY: BELONGS TO THE GLUTAREDOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                           Peptide H5 comprises amino acid residues 168-183 in the DEF box (I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30502-03) of the DEF box are capable of antagonising the terrodimerisation of a DP protein with an E2F protein. Also claimed are variants of these peptides, especially containing substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and a membrane translocation sequence (see AAW30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used to therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging cardiovascular cells, either in vivo or in vitro, e.g. for purging cardioplasty. (I)-(III) function by inactivating the DNA-binding cardioplasty. (I)-(III) function by inactivating the DNA-binding reagents as positive controls in assays for identifying antagonists of DP-1/E2F dimerisation and as immunoassay agents. Candagonists (I)-(III) to control DP levels in cells, particularly by gene therapy. When formulated with cytotoxic or cytostatic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                 Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;

Peptide H2 comprises amino acid residues 166-184 in the DEF box CC (I) (see AAW30501) of transcription factor DP1. Claimed peptides CC (II) (see AAW30504-07) containing one or both of 2 motifs (see CAW30504-07) containing one or both of 2 motifs (see CC AM330502-03) of the DEF box are capable of antagonising the CC claimed are variants of these peptides, especially containing the peterodimerisation of a DP protein with an E2F protein. Also CC claimed are variants of these peptides, especially containing CC claimed are translocation sequence (see AAW30508), expression vectors membrane translocation sequence (see AAW30508), expression vectors candiovascular cells. (I)-(III) are used to therapetrically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging condiovascular cells, either in vivo or in vitro, e.g. for purging treat or prevent restencies in patients who have undergone angioplasty. (I)-(III) function by inactivating the DNA-binding activity of DP/E2F heterodimers. They are also used as research areagents, as positive controls in assays for identifying cartivity of DP/E2F dimerisation and as immunoassay agents. Also described is the use of sequences antisense to nucleic acids encoding (I)-(III) hearpy. When formulated with cytotoxic or cytostatic agents, (I)-(III) in the largely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                         Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   E2F activity; inhibitor; treatment; tumour; arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 76; DB 19; Length 19; 100.0%; Pred. ```

```
This represents a compound that can inhibit E2F activity. The compound is of the formula R1 - A - R2 where R1 is an optionally substituted alkanoyl, alloyl, hetero-arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, hetero-aryloxycarbonyl, or H, R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region or DNA binding region, of at least 12 consecutive amino acids. Compounds of this formula can be used to inhibit E2F activity, and are useful in the treatment and prevention of tumours and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of transcription factor DPI. Claimed fragments (II) (see AAW30502-07) of transcription factor DPI. Claimed fragments (II) (see AAW30502-07) of (I) are capable of antagonising the heterodimerisation of a DP protein with an BZF protein. Also claimed are fusion proteins of (III) comprising (I) or (II) and a membrane translocation sequence (III) comprising (I) or (II) and a membrane translocation sequence (see AAW30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used therapeutically to induce apoptosis. specifically in tumour or cardiovascular cells, either in vivo or in specifically in tumour or cardiovascular cells, either in vivo or in viro, e.g. for purging bone marrow. Surgical stents comprising (I)-(III) are used to treat or prevent restenosis in patients who have undergone angloplasty. (I)-(III) function by inactivating the bave undergone angloplasty. (I)-(III) function in assays for used as research reagents, as positive controls in assays for identifying antagonists of DP-1/E2F dimerisation and as immunoassay agents. Also described is the use of sequences antisense to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide H (I) comprises residues 163-199, i.e. the DEF box region, of transcription factor DP1. Claimed fragments (II) (see AAW30502-07)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide H2mt2 is based on peptide H2 (see AAW30504) from the DEF box residues of transcription factor DP1. In H2mt2, amino acid are sidues of H2 that correspond to DP1 residues Arg167 and Asp171 are substituted by Ala residues. H2 is an antagonist of the heterodimerisation of DP1 with E2F. H2mt2 recains some, but not all, of this antagonistic activity. H2 and other claimed peptides (see AAW30504-07) from the DEF box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells,

The H2mtl peptide, in which H2 residues corresponding to DP1 residues Vall69 and Vall75 are substituted by Ala residues, behaves in a similar fashion to the wild-type H2 peptide in its ability to inactivate E2F site DNA binding activity in D9 EC cell extracts. H2 is an antagonist of the heterodimerisation of DP1 with E2F. Thus, the Val-169 and Val-175 residues of H2 play little role in this activity. H2 and other claimed peptides (see AAW30504-07) from the DEF box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells, e.g. for the prevention of restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                          Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

(I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30504-07) containing one or both of 2 motifs (see AAW30504-07) containing one or both of 2 motifs (see AAW30504-07) containing one or both of 2 motifs (see AAW30504-03) of the DEF box are capable of antagonising the heterodimerisation of a DP protein with an BZP protein. Also claimed are variants of these peptides, especially containing substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and membrane translocation sequence (see AAW30508), expression vectors cardiovascular cells. (I) (III) are used to therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging treat or prevent restenosis in patients who have undergone angioplasty. (I) (III) function by inactivating the DNA-binding activity of DP/BZP heterodimers. They are also used as research reagents, as positive controls in assays for identifying antagonists of DP-1/EZP dimerisation and as immunossay agents. Also described is the use of sequences antisense to nucleic acids encoding (I) (III) to control DP levels in cells, particularly by gene therapy. When formulated with cytotoxic or cytostatic agents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                 DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour; surgical stent; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide H7 comprises amino acid residues 170-199 in the DEF box
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 88.2%; Score 67; DB 19; Length 30; Best Local Similarity 100.0%; Pred. Peptide H6 comprises amino acid residues 167-180 in the DEF box region (see AAW30501) of transcription factor DP1. Unlike claimed peptides (see AAW30504-07) that contain one or both of 2 motifs (see attagonism) of the DP1 DEF box, peptide H6 is not capable of antagonising the heterodimerisation of a DP protein with an E2F protein. The claimed peptides, their variants and fusion proteins can be used to induce apportosis, specifically in tumour and cardiovascular cells, e.g. to prevent restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                              Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

This represents a compound that can inhibit E2F activity. The compound is of the formula R1 - A - R2 where R1 is an optionally substituted alkanoyl, alloyl, hetero-arylcarbonyl, alkoxycarbonyl, aryloxycarbonyl, hetero-aryloxycarbonyl, or H, R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region, of at least 12 consecutive amino acids. Compounds of this formula can be used to inhibit E2F activity, and are useful in the treatment and prevention of tumours and arteriosclerosis.
                                                                                                                                                                                                                             E2F activity inhibitors - for treatment and prevention of tumours and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               76.3%; Score 58; DB 19; Length 15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide HZmt3 is based on peptide H2 (see AAW30504) from the DEF box (see AAW30501) of transcription factor DP1. In HZmt3, amino acid residues of H2 that correspond to DP1 residues Leu173 and Leu176 are substituted by Arg residues. H2 is an antagonist of the heterodimerisation of DP1 with E2F. H2mt3 has none of the antagonistic activity of H2. H2 and other claimed peptides (see AAW30504-07) from the DEF box region of DP1 can be used to induce apoptosis, specifically in tumour and cardiovascular cells, e.g. for the prevention of restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        E2F activity; inhibitor; treatment; tumour; arteriosclerosis

New isolated, enriched, cell free and/or recombinant nucleic acid useful for e.g. altering cell proliferation characteristic such as to alter plant cell, organ or tissue size -
                                                                                                                                                                                                                                                                                                                                                                                       AB67764-68 represent fragments of a wheat E2F-dimerisation partner (DP) protein. The protein acts as a plant E2F transcription factor. E2F and DP are two proteins that hetero-dimerise to form an active transcription factor that regulates G1 to S phase of the cell cycle, and later, the expression of genes required for S-phase progression. E2F and retinoblastoma protein also interact as a hetero-dimer in cells to suppress certain genes. This repression involves binding of the retinoblastoma protein to the E2F-DP dimer that is in turn bound to sites on DNA through the E2F DNA binding domain. DP proteins can be modulated to alter plant cell, organ or tissue shape, and alter plant cell, organ or tissue shape, and alter plant cell, organ or tissue shape, and alter plant cell, organ or tissue shape.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour; surgical stent; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW30505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents 42% of the middle region of soybean cell cycle regulatory protein DP-1, as deduced from an isolated CDNA clone (see AAZ34575-9). The invention relates to nucleic acid fragments (see AAZ34575-83) encoding plant CDC-16, DP-1, DP-2 and E2F cell cycle regulatory proteins (see AAX32159-67). It also calates to the construction of a chimeric gene encoding all or a portion of the cell cycle regulatory protein, in sense or antisense corientation, where expression of the chimeric gene results in producton of altered levels of the cell cycle regulatory protein in a transformed host cell. The nucleic acids and proteins may be used to facilitate studies of cell cycle regulation in plants, provide genetic tools to enhance cell growth in tissue culture, increase gene transfer efficiency and provide more stable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transformations. The proteins may also provide targets to facilitate design and/or identification of cell cycle regulatory proteins that may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     E2F-dimerisation partner; DP protein; E2F transcription factor; G1 phase; S phase; cell cycle; retinoblastoma protein; alter cell proliferation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABB4295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                    Peptide H3 comprises amino acid residues 174-193 in the DEF box (I) (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30504-07) containing one or both of 2 motifs (see AAW30502-03) of the DFF box are capable of antagonising the heterodimerisation of a DP protein with an E2F protein. Also claimed are variants of these peptides, especially containing substitutions of residues corresponding respectably containing and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and a membrane translocation sequence (see AAW30508), expression vectors encoding (I)-(III) and host cells. (I)-(III) are used to therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vitro, e.g. for purging bone marrow. Surgical stents comprising (I)-(III) are used to treat or prevent restenosis in patients who have undergone treat or prevent restenosis in patients who have undergone angioplasty. (I)-(III) function by inactivating the DNA-binding cartivity of DP-I/E2F dimerisation and as immunoassay agents.

Also described is the use of sequences antisense to nucleic acide encoding (I)-(III) to control DP levels in cells, particularly by gene therapy. When formulated with cytotoxic or cytostatic agents, cells (I)-(III) enhance cell killing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

                                                                                                                                                                                                                                                                                                                         The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver. comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but, was obtained in electronic format directly printed specification but, "..."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide #10461 encoded by human foetal liver single exon probe.
                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analysing gene expression in human adult liver -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human brain expressed single exon probe encoded protein SEQ ID NO: 35964.
                                                                                                                The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;
Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 4; SEQ ID NO: 35964; 650pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                Peptide #10814 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human peptide encoded by genome-derived single exon probe SEQ ID 35546.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, single exon probe; asthma; lung cancer; COPD; LLD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous aclarosis; daucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia;

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived cuche nucleic acid probes for measuring gene expression in a manple derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes; the novel set of probes which hybridise at high extragency to a nucleic acid expression in the human lung, comprising (a) contacting the novel set of probes which hybridise at high extragent of a collection of detectably labeled nucleic acid derived from human lung, comprising (a) contacting the array with a complete care of the label detectably bound to each probe of the array; identifying exons in a eukaryotic genomic sequences of the eukaryote; and (b) detecting at least one exon from genomic sequence of the eukaryote; and (b) detecting at least one exon from genomic sequence of the eukaryote; and (b) detecting at least one exon from genomic sequence by the method copprising (a) identifying exons to a single exon probe, having a fragment identical to the predicted exon, the probe is included copprising (b) measuring the expression of each of the exons in several compression of the exons in the tissues and/or cell types using hybridisation to a single exon in several copperator of the exons in the tissues and/or cell types using hybridisation to a single exon in expression of the exons in the tissues and/or cell types using frames (lip). The probes are used for gene of 12011 sequences, mentioned in the specification, or encoded by the expression analysis, and for the set suddy or cell types using frames (lip). The probes are used for gene or probes/open reading frames (lip). The probes are used for gene or probes/open reading frames (lip). The probes are used for gene or such as asthma. Jung cancer, chronic obstructive pulmonary dysplasis, primary chilary dysplasis, primary chilary dy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -
primary ciliary dyskinesis; pulmonary hypertension;
hyaline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 27; SEQ ID No 35546; 634pp; English.

This sequence represents 10% of the middle region of soybean cell cycle regulatory protein E2F, as deduced from an isolated cDNA clone (see AAZ34583). The invention relates to nucleic acid fragments (see AAZ34575-93) encoding plant CDC-16, DP-1, DP-2 and E2F cell cycle regulatory proteins (see AAX32159-67). It also relates to the construction of a chimeric gene encoding all or a portion of the cell cycle regulatory protein, in sense or antisense orientation, where expression of the chimeric gene results in producton of altered levels of the cell cycle regulatory protein in a transformed host cell. The nucleic acids and proteins may be used to facilitate studies of cell cycle regulation in plants, provide genetic tools to enhance cell growth in tissue culture, increase gene transfer efficiency and provide more stable
                                                            soybean; cell cycle regulatory protein; transcription factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transformătions. The proteins mây also provide targets to
facilitate design and/or identification of cell cycle regulatory
proteins that may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DP-1; transcription factor; antagonist; E2F protein; apoptosis; cell proliferation; cardiovascular cell; restenosis; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 57.9%; Score 44; DB 20; Length 80; Best Local Similarity 43.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide H1 comprises amino acid residues 166-176 in the DEF box region (see AAW30501) of transcription factor DP1. Unlike claimed peptides (see AAW30504-07) that contain one or both of 2 motifs (see AAW30502-03) of the DP1 DBF box, peptide H1 is not capable of antagonising the heterodimerisation of a DP protein with an B2P protein. The claimed peptides, their variants and fusion proteins can be used to induce apoptosis, specifically in tumour and cardiovascular cells, e.g. to prevent restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis

The invention relates to a novel cell cycle protein (CCP) and the polymetric conditions are according them. CCP is useful for identifying a compound which but a carrivity of the polymetride and which bluds to the polymetride and an anti-CCP antibody is useful for detecting the presence of CCP in a sample. A CCP modulator is useful for modulating the cell polymetride and an anti-CCP antibody is useful for modulating the cell of CCP in a sample. A CCP modulator such as Arabidopsis thalians, rice, wheat, maize, tomato, alfalfa, oilseed rape, soybean, sunflower and canola. CC crossist control of CCP protein control of CCP modulating of CCP modulating cell cycle progression in plants. CCP is useful to agents in regulating cell cycle progression in plants. CCP is useful to compound that bind to or modulate the activity. Compounds that bind to or modulate the activity of CCP protein forms which have decreased or cCC protein corner with a control of CCP polypepide are useful as herbicides or plant growth regulators. CC cCP polypepide are useful as herbicides or plant growth regulators. CC cCP polypepide are useful for modifying cell face, plant development, the polymorlectical substance of the cell cycle of a plant, initiation, shoot and or development, thouse, fruit, leaf formation, seed set, initiation and/or development, though function, dwarfism in plants. CS seed size, seed development, thouse, fruit, leaf formation, seed set, cand the anti-CCP antibody are useful in agriculture to modulate the contribution and seed development, and application, and set of a protein involved in the cell cycle due content and seed development, seed about a strass such as pathogen at tack, to modulate set. Grants or the path of a continion, had attended to strasse such as pathogen at actack, to modulate set. Grants or the path of contrained contents of strasses such as a such as an immunogen to generate antibodies. CCP protein is useful to represents a motif which may be found in a CCP protein in a CCP protein to a continity or cour
                                                                                                                                                                                                                                  New cell cycle protein and nucleic acid molecule encoding it useful for regulating cell cycle progression in plants and for identifying modulators which are useful as herbicides or plant growth regulators -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 / Match 53.9%; Score 41; DB 23; Length 35; Local Similarity 66.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cell cycle protein; CCP; cell cycle regulation; herbicide; plant growth regulator; plant development; abiotic stress; biotic stress; nutrient deprivation; pathogen attack; crop yield; motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This peptide comprises amino acid residues 175-183 in the DEF box region (see AAW30501) of transcription factor DP1. Claimed peptides (II) (see AAW30502-07) containing this and/or another motif (see AAW30503-06 the DEF box, are antagonists of the heterodimeriation of a DP protein with an E2F protein. Also claimed are variants of these peptides, especially containing substitutions of residues corresponding to residues 167, 169, 171 and 175 of DP-1, fusion proteins (III) comprising (I) or (II) and a membrane translocation proteins (III) comprising (I) or (II) and a membrane translocation proteins (III) are used therapeutically to induce apoptosis, specifically in tumour or cardiovascular cells, either in vivo or in vivo. e.g. for purging bone marrow. Surgical stens comprising (I)-(III) are used the purging bone marrow. Surgical stens comprising (I)-(III) are used to treat or prevent restencists in patients who have undergone angioplasty. (I)-(III) function by inactivating the DPAEP heterodimers. They are also used as research reagents, as positive controls in assays for identifying antagonists of DP-1/E2F dimerisation and as immunoassay capents. Also described is the use of sequences antisense to mucleic acids encoding (I)-(III) to control DP levels in cells, incleasing chartcularly by gene therapy. When formulated with cytotoxic
                                                                                                                                                                                                                                                                                                                                                                 Polypeptide fragments of the DP-1 transcription factor - used for inducing apoptosis, specifically in tumour and cardiovascular cells, e.g. for preventing restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

E2F activity inhibiting compound Ia-3.

Ë

Yoshida

```
This represents a compound that can inhibit E2F activity. The compound also of the formula R1 - A - R2 where R1 is an optionally substituted alkanoyl, alloyl, hetero-arylcarbonyl, alkoyycarbonyl, aryloxycarbonyl, hetero-aryloxycarbonyl, or H, R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region or DNA binding region, of at least 12 consecutive amino acids. Compounds of this formula can be used to inhibit E2F activity, and are useful in the treatment and prevention of tumours and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, telomerase reverse transcriptase; TERT; Site C; Progeria; burn; repressor binding site; Hutchinson-Gilford syndrome; AIDS; cancer; acquired immunodeliciency syndrome; cardiovascular disease; osteoporosis; skin rejuvenation; immune senescence; bone marrow transplant; skin graft; neoplastic disease; TERT minimal promoter; DNA binding domain; E2F-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modulating expression of telomerase reverse transcriptase (TERT) in a

                                                                                                                                                                                                                                                                                                                                                                                                                                        is of the formula R1 - A - R2 where R1 is an optionally substituted altanoyl, alloyl, alloyl, hetero-arylcarbonyl, altoxycarbonyl, arylcxycarbonyl, hetero-arylcxycarbonyl, or M. R2 is OH, or optionally substituted alkoxy or amino, and A is an E2F family dimer forming region or DNA binding capion, of at least 12 consecutive amino acids. Compounds of this formula can be used to inhibit E2F activity, and are useful in the treatment and prevention of tumours and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                         This represents a compound that can inhibit E2F activity. The compound

The present invention relates to a new method of modulating expression of telomerase reverse transcriptase (TERT) from a TERT expression system that includes a TERT promoter and a Site C repressor binding site. The method of the invention involves modulating TERT transcription repression to be the invention is consisted to be a site. The method of the invention is consisted to be a site. The method of the invention is consisted to be a strength of the invention is consisted to be a site. The method is also useful in a variety of different applications, including immortalisation of cells, production of reagents of or use in life science research, therapeutic applications, and therapeutic applications, increases telomeric length and cellsys natural telomeric shortening and/or increases telomeric length and is useful for treating disease conditions such as Progeria or the proper disease, osteoporosis, in skin rejuvenation and to inhibit cardiovascular disease, osteoporosis, in skin rejuvenation and to inhibit of proper remodeling and reinforcement, and can thus be used in bone marrow and sense tem cells, encouraging bone replacement and continue and such the method improves the survival and effectiveness of continue and skin deficiency such and stin cell transplants. Decreasing TERT expression is needful for treating cellular prolliferative disease conditions, including concern the present amino acid cegerane.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Telomerase reverse transcriptase; TERT; Site C repressor; transcription; cytostatic; immunostimulant; anti-HIV; vulnerary; telomerase; human;

                                                                                      transcriptuse (TERT) expression system that includes a TERT promoter and a Site C repressor binding site. The method involves modulating TERT transcription repression by the Site C repressor binding site. The method and compositions of the present invention are useful for the immortalization of tells, production of reagents in life schence research, therapeutic agent screening applications, diagnosis and treatment of disorders associated with aberrant telomerases activity such as cancer, Progeria, immune senescence, HIV, and in skin rejuvenation. The present sequence represents the DNA binding domain of a repressor protein E2F-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modulating expression of telomerase reverse transcriptase (TERT) in a cell, for regulating proliferative capacity of a cell, involves modulating TERT transcription repression by Site C repressor binding
                                                                                                                                                                                                                                                                                                                                    Gарв

```

The present invention relates to a new method of modulating expression of telomerase reverse transcriptase (TERT) from a TERT expression system that includes a TERT promoter and a Site C repressor binding site. The method of the invention is needed to the invention involves modulating TERT transcription repression by the Site C repressor binding site. The method of the invention is caseful for modulating expression of TERT for producting a mammalian antibody. The method is also useful in a variety of different applications, including immortalisation of cells, production of reagents of the repentic agent screening applications. Increasing TERT expression delays natural telomeric shortening and/or increases telomeric length and the useful for treating disease conditions such as Progeria or cardiovascular disease, osteoporosis, in skin rejuvenation and to inhibit immune sensescence. The method can be employed to lengthen telomerse of osteoblast and osteoclast stem cells, encouraging bous replacement and proper remodeling and reinforcement, and can thus be used in bone marrow transplants for the treatment of cancer and skin grafts for burn victims and as such the method improves the survival and effectiveness of the merrow and skin cell transplants. Decreasing TERT expression is useful for treating cellular proliferative disease conditions, including cellular proliferative disease conditions, including cepace represents the human DNA binding domain E2F-4. ö Gaps ö 23; Length 76; 5; Indels Score 38; DB Pred. The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27522 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated (sorder in humans, and in the manufacture of a medicament for treating a disorder in humans, and in the manufacture of a medicament for treating a sequences can be used in gene therapy. ORFX sequences can be used in the therapy. ORFX sequences can be used in the creating a sequences can be used in gene therapy. ORFX sequences can be used in the creatment of cancer, hyperproliferative disorders, cirrhosis of liver, treatment of cancer, hyperproliferative disorders, isorders, pasenorrhage, osteoarthritis, neurodegenerative disorders, disorders pasted to organ cramplantation, cardiovascular diseases, disorders related to organ cramplantation, cardiovascular diseases, disorders, infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid disease, autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut creating on triating disease. ORFX proteins are also creatision injury in various tissues and conditions resulting from the man and treatment of flung or liver fibrosis, and man and present and conditions resulting from the man and conditions anotation and conditions and conditions and conditions and conditio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence is a polypeptide encoded by a cDNA assembled using an expressed sequence tag (EST) found to be expressed in human foetal tissue cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention relates to the isolation of novel human colon associated polypeptides, and the cDNA (AAS39348-AAS39581) and genomic sequences encoding for them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders of the colon including colon cancer, congenital abnormalities of the colon including colon cancer, congenital abnormalities of the colon including colon cancer, congenital abnormalities inflammatory bowel disease (IBD), neoplastic cell disorders, colinic inflammation, diarrhoea and dysentery, malabsorption syndromes colonic inflammation, diarrhoea and dysentery, malabsorption syndromes (e.g. lactose incolerance), intestinal inflammatory disorders, colinic inflammation, diarrhoea and dysentery, malabsorption syndromes (e.g. lactose incolerance), intestinal obstruction and sigmoid diseases. The polymucleotides sequences of the invention can also be used in gene therapy. AAU22468-AAU22701 represent the novel human colon associated polymphighes of the invention.

Colonic The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO of the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; digestive system antigen; gene therapy; cancer; appendicitis; ulcerative colitis; infection; Hirschsprung's disease; chronic colitis; digestive system disorder; Meckel's diverticulum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated polypeptide for treating, preventing and or prognosing disorders related to the colon including colon cancers and also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                    ö
                                                                                           The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABPS-124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to acree for compounds able to interfere with the S. epidermidis lifections.
                                                                                                                                                                                                                                                                                                                                                                                                                         Staphylococcus epidermidis; open reading frame; ORF; bacterial infection; antibacterial; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cycle or inhibit S. epidermidis infection.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic represent sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human immune/hematopoietic antigen polypeptides, diagnosing and/or treating cancers and

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gymaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and renear and antibodies to the proteins are useful for the prevention, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polymuclectides may be used in diagnostics and research, such as for chromosome identification, and as hybridiation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune gastrointestinal disorders, wounds, real disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAC98707 represent sequences used in the exemplification of the present

AAW71314 and AAW79337-39 represent Staphylococcus aureus WCHU (NCIMB 40771) proteins that have homology to Haemophilus influenzae haein lipoic acid synthetase (lipoate biosynthesis protein A (liph) homologue. The protein is used to generate antibodies and to screen for antimicrobials. The products are used to treat or prevent bacterial infections, particularly where caused by S. aureus but also against Helicobacter Pylori: Particular applications are to treat subjects before surgery or insertion of an in-dwalling device (alternatively the device itself is impregnated before placement). The nucleic acid sequence is used as sources of antisense sequences (for therapeutic use) or regulatory elements for controlling expression of bacterial genes, and for antibacterial screening. The protein can be also used as a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; 5' EST; expressed sequence tag; secreted protein; diagnosis; gene therapy; chromosome mapping; upstream regulatory sequence; forensic; location; development; protein synthesis; stability; regulation; identification.

coding sequences (AAF72741-AAF72789) and proteins (AAB80273-AAB80321).

The coding sequences and proteins of the present invention are useful for preventing, treating or amelicating a medical condition; and for the diagnosis and treatment of diseases and disorders. Diseases and disorders that can be diagnosed and treated include (auto)immune diseases and disorders (e.g. graft versus host disease and rheumatoid arthritis), inflammatory and allergic disorders (e.g. asthma), hyperproliferative disorders (e.g. cancers and leukemias), cardiovascular disorders (e.g. hart attacks and arrythmias), cerebrovascular disorders (e.g. stroke), arterial occlusive disorders (e.g. arteriosclerosis), angiogenesis related disorders (e.g. retinopathy and keloid scars), coular disorders (e.g. glancoma), nuroscipal disorders (e.g. Alzheimer's, Parkinson's disease, epilepsy and Creutzfeld-Jakob disease) and infections caused by bacteria, fungi, viruses or parasites. They may also be useful for wound healing, epithelial cell proliferation, supporting cell cuture, tissue regeneration, birth control and as a food additive or preservative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to human secreted prostate cancer antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;
                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid molecule encoding human secreted prostate cancer antigens, useful for the diagnosis and treatment of disorders such cancer, leukemia and autoimmune disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Propionibacterium acnes immunogenic protein #21506.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             dermatological; osteopathic; neuroprotectant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 34; DB 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY65438 represent the EST-related proteins. AAX6651 to
AAX65438 represent the EST-related proteins corresponding to AAZ42265 to
AAX465438 represent the EST-related proteins corresponding to AAZ42265 to
AAZ43052. The S. ESTS can be used for producing secreted human gene
products. They can be used to identify and isolate S' untranslated
regions (UTRs) and upstream regulatory regions which control the
ceptons (UTRs) and upstream regulatory regions which control the
coation, development stage, rate, and quantity of protein synthesis, as
well as stability of mRNA. The ESTS are also useful as probes for
chromosome mapping, and to obtain full length cDNA clones. The ESTS can
also be used in forensic procedures to identify individuals, or in
calso be used in forensic procedures to identify individuals and be used
in gene therapy protocols. The nucleic acids encoding signal peptides can be
used for directing extracellular secretion of a polypeptide
into a cell. The proteins encoded by the EST sequences may be useful in
the acell. The proteins encoded by the EST sequences may be useful in
the acell. The proteins encoded by the EST sequences may be useful in
the acell. The proteins encoded by the RST sequences may be useful in
the acell. The proteins encoded by the RST sequences may be useful in
the acell. The AAX42249 to AAX42264 and AAX426450 represent
therapeutic value, and the identification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    유
ð
                                                                                                                                                                                                                            Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in polypeptides. The proteins and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

The acnes is also involved in infections of bone, joints and the central carvin, however it is particularly involved in the inflammatory lesions system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The colypeptides may be used as antigens in the production of antibodies polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downrequlate expression and activity of P. acnes proteins and ctivity of P. acnes proteins and ctivity of P. acnes presence, for example, by cannot inked immunosorbent assay (ELISA).

Compresence of an acnes and assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schrzophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                      Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel reproduction-specific protein, useful for treating disorders of reduced sperm count, enhancing/increasing sperm count and/or sperm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mammalian; reproductive-specific protein; male infertility;
spermatogenesis; sperm count disorder; anti infertility; reproduction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-SEP-2001
```

The present invention relates to the isolation of novel mammalian and human reproductive-specific proteins (AAU07859-AAU07899), and the nucleic acids encoding them. The nucleic acids encoding reproductive-specific proteins are useful for diagnosing infertility which is a result of reduced sperm count, reduced sperm motility, malch is a result of reduced sperm count, reduced sperm motility, and for useful as markers for spermacogonial cells, for identifying genes or proteins characteristic of male infertility, diagnosing or aiding in the diagnosis of infertility in men, and for contraception in which sperm production or sperm count is reduced or defective sperm is produced. Antibodies to reproductive-specific proteins are useful for determining the presence of these proteins in a sample obtained from a man being assessed for infertility, for identifying the expression of genes in particular cell type or particular developmental stage, for studies of spermatogenesis, and for immunofluorescence of germ cells or in Western blots for assessing the presence of the protein the antibody binds. The sequences of the invention are also useful for treating disorders of reduced sperm count, and for increasing sperm count and/or sperm activity. The nucleic acids of the invention are useful in gene therapy. AAU07882-AAU07882 represent the mammalian reproduction-specific proteins of the present invention. 80 AA; Sequence
